**EIPIEN<sup>®</sup>**

(Adrenaline) Auto-Injector 0.3mg

**Dear Patient**

**You may notice some differences between your recent EpiPen® (epinephrine) auto-injector and your usual EpiPen®.**

The Medicines and Healthcare Products Regulatory Agency in the UK has approved the release of US **EpiPen®** 0.3 mg, Batch 9FM766 to enable continuous access of adrenaline auto-injectors in the UK.

The US label says “epinephrine”, which is the name for "adrenaline" in the US.

This device is exactly the same as your UK **EpiPen®** (adrenaline) auto-injector in every way except the label.

**You must dial 999, ask for an ambulance and state ‘anaphylaxis’ (pronounced ‘anna-fill-axis’) immediately after administering the EpiPen® (adrenaline) auto-injector.**

You should read the patient information leaflet inside your **EpiPen®** carton which contains advice for patients in the UK. If you have any concerns, talk to your doctor or pharmacist.

Please be aware that this information applies only to this single batch of US **EpiPen®**.

**EPIPEN®**
